Analysis of production lines with general service times and finite buffers: A two-node decomposition approach
T. Altiok and R. Ranjan (Piscataway, NJ, U.S.A.) 155

Multi-item production control for production to order
N.P. Dellaert (Rotterdam, The Netherlands) 167

Some properties of the sequential Markovian allocation problem
V. Saario (Tampere, Finland) 175

Generalizing the price-break EOQ problem
F.J. Arcelus and J.E. Rowcroft (Fredericton, Canada) 183

Production Innovation Management

Developing computer integrated manufacturing: Major issues and problem areas
C.A. Snyder (Auburn, AL, U.S.A.) and J.F. Cox (Athens, GA, U.S.A.) 197

Capacity planning of diagnosis systems in hospitals
G. Fandel (Hagen, Germany) and H. Hegemann (München, Germany) 205

Survey of robotics in the health care industry
J.R. Minifie (San Marcos, TX, U.S.A.) 223

Production Information Systems

Demand forecasting for parts used in modular products: A case study
M.S. Romanos (Thessaloniki, Greece) 231

Geometric search theory and demand uncertainty
S. Alpern (London, Great Britain) 245

Measuring logistics performance
P. Andersson, H. Aronsson and N.G. Storhagen (Linköping, Sweden) 253

Investment and Financial Planning

The single quantity-discount problem under ROI maximization
F.J. Arcelus and G. Srinivasan (Fredericton, Canada) 263

Criteria for asset replacement studies
M. Longo and D. Zanobetti (Bologna, Italy) 271

A deposit planning framework at the banking system level in India
B.N. Bhattacharyay (Pune, India) 277

Strategic Planning for Production Systems

The strategic management of manufacturing technology
B. Flores (College Station, TX, U.S.A.) and D.C. Whybark (Bloomington, IN, U.S.A.) 293

The combination of creative vision with quantitative evaluation of alternative strategies as a key success factor in production economics
H.H. Hinterhuber (Innsbruck, Austria) and W. Popp (Basel, Switzerland) 303

JIT applications to warehousing operations
J.G. Carlson (Los Angeles, CA, U.S.A.) 315

Forecasting methods for CIM technologies
I. Tchijov (Laxenburg, Austria) and E. Norov (Moscow, U.S.S.R.) 323

Simulation Applications

Computer-based multi-attribute simulation of production and financial strategies
H. Kivijärvi (Helsinki, Finland) and M. Tuominen (Lappeenranta, Finland) 331

The simulation of the procurement of an avionic logistic system
D.J. Bainton (Bath, Great Britain) and J.H. Williams (Cardiff, Great Britain) 343

An intelligent simulation environment for production/distribution systems
B. Khoshnevis and W.M. Austin (Los Angeles, CA, U.S.A.) 351

Decision Support Systems

FINSIM expert; A KB/DSS for financial analysis and planning
M. Klein (Jouy en Josas, France) 359

A short term forecasting DSS for improving the sales/manufacturing linkage
Ph. Gangneux (Hauts-De-Seine, France) 369

A decision support system for planning chemical production of active ingredients in a pharmaceutical company
K. Jäger, W. Peemöller and M. Rohde (Berlin, Germany) 377

Product Pricing and Costing

Supply decisions for unknown linearly increasing demand
D.J. Reyniers (London, Great Britain) 389

Ordering and stockholding under price inflation when prices increase in successive discrete jumps
B.G. Kingsman and A. Boussofiane (Lancaster, Great Britain) 395
